Professional Summary

I am a final year undergraduate student at VIT-AP university. I have hands on experience with cloud (AWS, GCP), building production ready AI agents that mostly reduce eighty percent of human efforts and building custom Model Context Protocol servers using FastMCP and Docker. Interested in building scalable architectures for the software that handles high traffic, also, I build workflow in GCP that helped in gathering data for marketing analysis and visualize them using looker dashboards. I have a strong foundation in Data Structures, Algorithms and core computer science subjects. I believe in not to wait for 100%, complete 80% and learn from 20%.

Technical Skills

GenAI & LLMs : Model Context Protocol, Tool Calling, Anthropic Claude Code, Harness and Agentic Workflows
Cloud & DevOps : Amazon Web Services, Google Cloud Platform , Can manage infrastructure using Terraform with Claude
Languages&Frameworks Python, Java, JavaScript, SQL, FastAPI, Node. js, Express. js, Flask, React. js
Databases & Storage : MongoDB, MySQL, Redis, DynamoDB, Vector Embeddings / Document Stores
Tools : Figma, Postman, Matlab

Work Experience

Turing IQ

AI Software Engineer Intern

May 2026 – August 2026

Remote

- Designed and built scalable marketing telemetry ingestion pipelines on GCP, leveraging BigQuery and Airflow, streaming real-time metrics across TikTok, Facebook, Apple Search, Pinterest, and Reddit APIs while consolidating all of them into a single view for easier analysis.
- Built a Agent that runs in Cloud Run and fires up when a failure event occurs in airflow DAGs. Purpose of this agent is to resolve failures occurred in DAGs while escalating the failed DAG details and draft possible resolution steps and raise a ticket to a person who is accountable for failure only if the failure needs human intervention.
- Developed and deployed production-grade custom MCP servers enabling autonomous agents to communicate with internal product APIs and telemetry datasets.

Cothon Solutions

Software & UI Engineering Intern

Aug 2025 – Sep 2025

Remote

- Recreated the Cothon Solutions website and provided a reusable component set.
- Created multi device compatible UI for Cothon solutions while meeting their requirements. This is done as a part of prototyping stage using Figma Software.

Technical Projects

AWS Hybrid Model Context Protocol (MCP) Server

Python, FastMCP, boto3, Docker, Fargate, ECS, AWS Labs

[GitHub Source Code](#)

- Architected a hybrid MCP server enabling agents to manage user's own Amazon Web Services using prompts from any agent they use.
- Developed 54 programmatic tools covering EC2, S3, Lambda, and RDS using FastMCP and boto3; bridged 6 official AWS Labs MCP servers via an async multiplexing proxy.
- Engineered autonomous agent playbooks for cost leak detection, S3 security audits, and real-time CloudWatch incident analysis. Hosted using Fargate and ECS services while containerized via Docker to run the server on AWS .

Jewel E-Commerce Platform

Python, Flask, React.js, REST APIs, JSON Architecture

[GitHub Source Code](#)

- Engineered a decoupled, multi-tier web application combining a reactive React.js frontend with a stateless, high-throughput Flask REST API.
- Enforced dynamic multi-parameter catalog filtering, transactional state handling, and asynchronous client-server synchronization layers.
- Structured optimized JSON serialization pipelines and defensive validation routines to minimize payload latency across client-server boundaries.

Education

VIT-AP University

B.Tech in Computer Science and Engineering CGPA: 8.83

2023 – 2027

Amaravati, AP, India

Bhashyam Junior College

Board of Intermediate Education AP (MPC) CGPA: 9.19

2021 – 2023

Guntur, AP, India

Kennedy High School

Secondary School Certificate (SSC) CGPA: 9.30

2016 – 2021

Guntur, AP, India

Certifications & Achievements

- AWS Certified Cloud Practitioner
- Full Stack Development with MERN from Blackbuck Academy
- Basic Python, Java, SQL from HackerRank.
- Winner, Design-a-thon (Next-Nexus, VIT-AP) — 1st Place for interface modeling in Figma.
